

# Flooring Collection

## Why SingleStrip?

WFI's engineered SingleStrip flooring format was specially created to replicate the look of traditional solid wood plank floors, sanded and finished in place. With these attributes, SingleStrip has succeeded:

- Sawn solid wood wear layer
- Thick 1/8" + wear layer allowing resanding up to three times
- Long, truly random lengths between 12" and 84" in 6" increments
- Milled square edge for a site-sanded and finished look

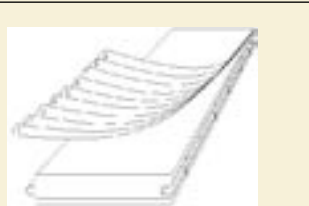

Inside  
Collection

## Why Exotic Woods ?

- Harder than Domestic Species
- Natural Colors - No Stains
- Beautiful Graining
- More Design Choices
- Unique Look to Each Wood

## High Wear Finish:

9-coat, High-Wear, UV-cured Acrylic Urethane with Aluminum Oxide in the base coats and Anti-Scratch top coats in a Satin Gloss.

- 1) Primer Coat
- 2, 3) Fill Coat with aluminum oxide and ceramic particles
- 4, 5, 6) Fill Coat
- 7, 8, 9) Anti-Scratch Top Coats

## What is Engineered Wood Flooring?

Engineered wood flooring is designed to resist wood's natural tendency to change dimensionally over time. Comprised of multiple layers of wood, cross-banded for stability, this construction style is

known as "engineered" wood flooring. Unlike solid wood flooring, engineered wood floors can be used in a greater range of installation settings and may be glued, nailed or floated on a wider variety of subfloors.

## Comparative Hardness Chart:

# WFI SingleStrip - The Exotic Flooring Collection

## ▲ Australian Cypress

*From the land down under - Australia, this is the warm and rustic species choice for those desiring a warm country look. With unique softwood visuals, this species is actually harder than red oak !*

## ▲ Brazilian Cherry

*The most popular imported hardwood flooring species to the U.S. Known for its hardness and durability, this exotic hardwood is a great choice in both residential and commercial installations.*

## ▲ Caribbean Rosewood

*One of the world's most beautiful woods that will make a dramatic design statement. With a wide range of striping, color, and swirling grains, Caribbean Rosewood is truly a unique wood.*

## ▲ Caribbean Walnut

*A visually interesting wood in a range of brownish tones with beautiful strong graining. Harder than domestic Walnut, Caribbean Walnut is sought after for distinctive settings everywhere.*

## ▲ Royal Mahogany

*Chosen for its striking resemblance to genuine Mahogany, but more suitable for flooring because it is harder. For centuries, Mahogany has been the choice for the finest furniture.*

## ▲ Santos Mahogany

*Another Mahogany-looking type of wood with extreme density and stability. One of the most popular exotic flooring choices for both commercial and residential settings.*

## ▲ Southern Chestnut

*Very similar in look to Teak but much harder and better suited for flooring use ! It is sought after in Europe for its fine color and graining.*
